

# NO MORE COLD SHOWERS

**NEW!**

INCREASE  
DELIVERABLE  
**HOT  
WATER**  
— UP TO —  
**45%**

## MORE HOT WATER

AutoBooster™ adds up to 45% capacity to water heater tanks, increasing the amount of available hot water. Homeowners can now enjoy hot showers, longer.

## SAVE SPACE

AutoBooster™ installs on an existing tank or it can be mounted nearby on the wall. It will give an electric 50 gal. tank the capacity of an 80 gal. tank, without taking up more space.

## SAVE ENERGY

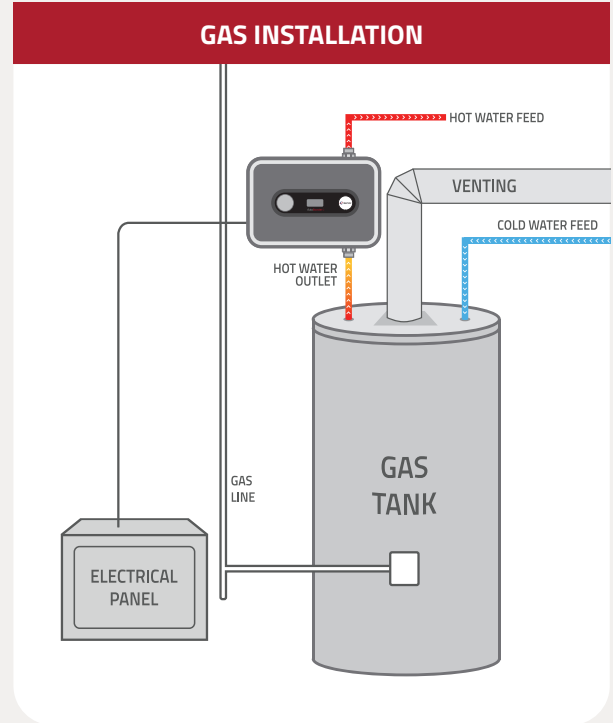

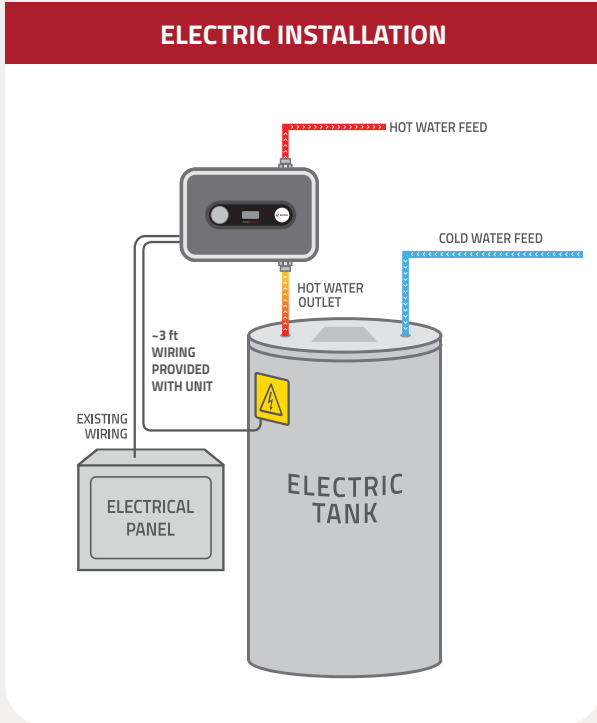

Vacation Mode and Eco Mode features allow homeowners to switch off power to their tank when it isn't needed, saving energy on hot water heating.

## SAVE MONEY

AutoBooster™ requires only one trade install and takes as little as 45 minutes, as opposed to new, larger tank installations. Vacation mode also saves homeowners money on energy bills.

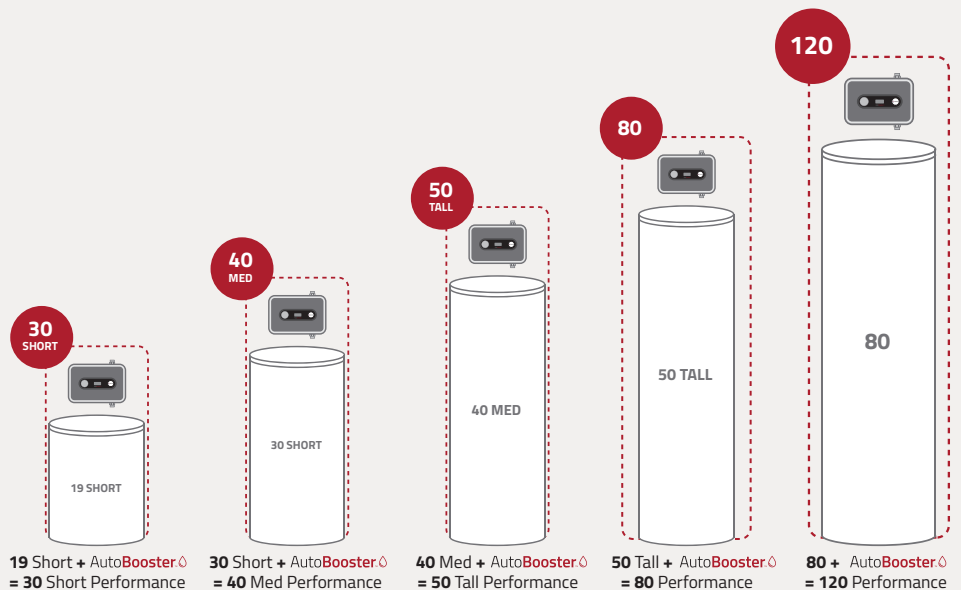

AutoBooster™ uses your existing electrical circuit, so there is no need for additional electrical infrastructure. The unit switches power between the tank and the booster to optimize your hot water capacity. \*
